EDUCATION

University of California, Berkeley (GPA: 3.81)

Berkeley, CA

B.A. Computer Science, B.A. Data Science

May 2027

Organizations: *Data Science Society (Project Manager, Technical Advisor), Cal Climbing (Membership, Treasurer)*

Coursework: *Data Structures, Machine Learning, Databases, Security, Algorithms, Robotics, Machine Architecture*

EXPERIENCE

Technical Advisor | UC Berkeley School of Law

September 2026 – Present

System Design, LLM/Agentic Workflows, and Data Infrastructure

Berkeley, CA

- Advise on benchmarking and optimizing open-weight LLMs and agentic workflows for secure automation supporting the Clean Slate Initiative's randomized study of criminal-record relief with UC Berkeley Law Professor Colleen Chien.
- Design web-scraping and data pipelines with integrity checks and supporting research infrastructure.
- Formulate causal experiments to optimize participant outreach, deliverability, engagement, and outcomes.

Collections Strategy Intern | Happen Bank

June 2026 – August 2026

formerly Lending Club

San Francisco, CA

- Engineered PySpark/SQL decisioning pipelines in Databricks across 73M+ records, utilizing chained MLflow uplift models to drive individualized borrower-day level collection outreach across a \$4.3B annual base.
- Built XGBoost models (S/T-Learners) with 40 borrower features and 24 interaction features, propensity weighting, and isotonic calibration to select the optimal outreach channel, intensity, and timing under legal compliance restrictions and operational capacity constraints.
- Achieved a 2.04% charge-off reduction on holdout evaluation, delivering an estimated \$20.4M in gross value and driving immediate population-level outreach strategy shifts.

Machine Learning Project Lead | Arc'teryx

January – May 2025

through Data Science Society at UC Berkeley

Vancouver, BC (Remote)

- Led 9-person team to design predictive machine learning models for optimizing day level retail labor allocation using 3 year historical traffic and sales data; daily predictions powered a dashboard for 80+ North American stores
- Engineered 14 external-factor features (e.g., weather, promotions) with APIs to enhance accuracy and interpretability
- Worked within Databricks, implementing and evaluating TensorFlow feedforward neural network, XGBoost gradient boosted trees, SARIMAX, and Prophet models with cross-validation and hyperparameter tuning

Data Science Consultant | Santa Clara County

August – December 2024

through Data Science Society at UC Berkeley

San Jose, CA (Remote)

- Developed and tuned 3 classification models (Random Forest, LightGBM, Neural Networks) to predict patient treatment outcomes with 50 features from CANS mental health assessments, achieving AUC up to 0.85 (LightGBM)
- Performed large-scale feature engineering and data cleaning across 46K+ patient records to optimize model performance
- Applied SHAP and permutation importance analyses to identify 5 key clinical and demographic drivers of successful exits

TECHNICAL PROJECTS

Secure File Sharing System | System Design, Go, Cryptography, Access Control, Testing

- Built a secure file storage and sharing system in Go supporting authenticated users, encrypted file storage, append operations, invitation-based sharing, and hierarchical access revocation
- Implemented cryptographic integrity checks, tamper detection, recursive access-tree revocation, and 50+ adversarial tests covering edge cases, multi-session consistency, and malicious datastore corruption

CPU Design and Implementation | C, Verilog, Logisim

- Designed and implemented a functional 32 register RISC-V CPU capable of executing assembly code including arithmetic, memory, and control instructions with a 3 stage pipeline
- Handled pipeline hazards through forwarding and basic branch control logic to improve instruction throughput and correct execution across benchmark tests

SKILLS

Languages: Python, Java, Go, C, SQL, RISC-V, Scheme, x86

Tools: Databricks, PySpark, Spark SQL, Trino, Hive, XGBoost, TensorFlow, Scikit-learn, Pandas, NumPy, Git, DataGrip
